Metique Tea Tree After Wax Lotion

Pregnancy's Hormonal Itch

Mmm, hives. The not-so pleasant side of pregnancy. You know, along with the sickness, the hair loss, the swollen body... This was the bit that really drove me to distraction, and it seems it affected some of you too. Firstly, you should definitely see your midwife about this particular problem, and possibly your GP. I actually only found my dermatologist to be truly helpful in the end – everyone else was stumped by my itchy rash. I was diagnosed with Polymorphic Eruption of Pregnancy and eczema, but there are a whole host of rashes that can crop up as a result of the insane hormonal surges your body is trying to handle. Sometimes it's just an itchy abdomen, as the skin stretches to accommodate your baby. The problem is, the usual itchy-skin medications...aren't all safe for use during pregnancy. Don't just merrily slap on Hydrocortisone as a doctor will often recommend against using it during pregnancy and breastfeeding. Instead, look at other remedies to cope with the itch and resulting sore skin. All you can really do.

£11.22. Yes, it's great for soothing skin post-wax, but its cooling effect and softening Vitamin E also calm itchy, inflamed skin elsewhere on your body. I'm assured it's safe for pregnancy, and I can vouch – it is the nuts.
